

## Aquatic Lining Systems

## System Description

Wolverine Coatings' Aquatic Lining Systems are 100% solids, thick film Advanced Hybrid lining systems designed for general use as a protective lining for swimming pools, aquatic environments, domestic waste water facilities, and other mildly aggressive immersion chemical environments. Our Aquatic Systems have excellent resistance to these environments while also displaying outstanding mechanical properties, such as adhesion and abrasion resistance. These systems were designed to be a high density (low porosity) lining system. They are a natural choice for aquatic environments as well as USDA & FDA Inspected facilities, clean rooms and other areas where a smooth easy to clean surface is desired.

## Application Summary

This system is mixed on site and typically applied with a roller or airless spray to create a smooth, glossy low porosity surface. It can be spray applied between 20 to 125 mils in a single coat. The base coat is available in several formulations that are tailored to the desired application thickness of a particular job.

## Common Applications

Pools, fountains, aquatic animal exhibits, water parks, water sports centers, aquatic training facilities

# Aquatic Lining Systems

SYSTEMS

## System Options

Primer: BondTite 1101 (also available in Extended pot life formulation, BondTite 1101-EP)

Base Coat: LiquaTile 1187 is available in three different formulations:

\*LiquaTile 1187-020 Roller or Spray applied to 20 mils

\*LiquaTile 1187-060 Spray applied up to 60 mils/coat

\*LiquaTile 1187-125 Spray applied up to 125 mils

Sealer Coat: HybriShield 2401

## Texture

Optional with aggregate: SpheriTex (Slip Resistance), WearResist (Wear Resistance)

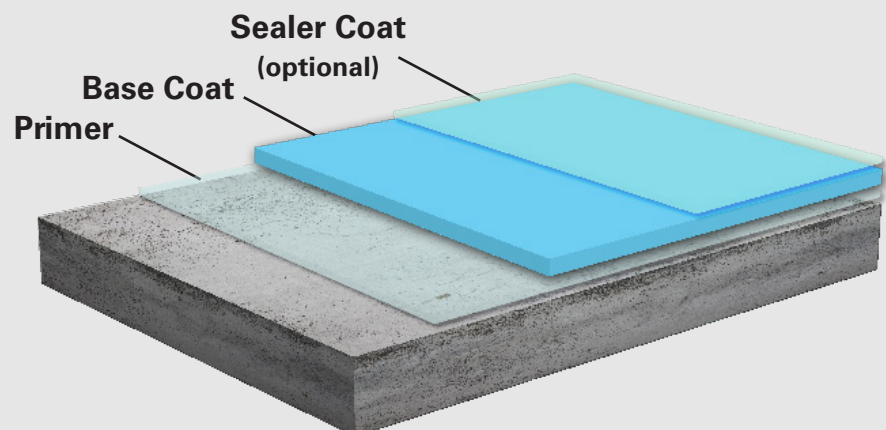

## Components

Primer: BondTite 1101, Base Coat: LiquaTile 1187,

Optional Sealer Coat: HybriShield 2401

## COLORS

The epoxy primer and base coat combination give durable protection for smooth, new concrete. The base coat is available in an assortment of standard colors. ... **See Reverse**
