

RestoraSeal 3515

RestoraSeal 3515 is a high performance Nano-Polymer Revitalizer and Sealer which impregnates asphalt with a protective membrane that waterproofs, seals, and restores asphalt with a fresh black hue. It penetrates deeply into the asphalt pores providing durability and protection against water, salts, and oxidation. RestoraSeal 3515 contains no silicones, waxes, or oils and does not fade, yellow, chip, or peel when applied properly. This coating is created with a new generation of Nano Polymer technology that creates a protective barrier that will outperform comparable solvent-based products. Treated surfaces shed water, dirt, soot and chemical contaminants to prevent staining and moisture damage to the matrix. Because of the unusual characteristics of this formulation, it may be used for many different applications.
